ABOUT ME

Full-stack software Developer passionate about building real-world web solutions that create meaningful user experiences. A problem solver with a strong ability to adapt to new challenges and learn quickly. Molded by hands-on projects and continuous learning, I am flexible in working across the entire application stack with a strong focus on delivering clean and efficient code.
Driven by a love for technology and innovation, I embrace challenges as opportunities for growth. Whether working on the front-end or back-end, I am committed to crafting solutions that add value and leave a lasting impact..

TECH SKILLS

- HTML / CSS
- Javascript (ES6) / Typescript
- Python
- React js / Next js
- Node js
- PostgreSQL / MongoDB
- Express js / Nest js
- RTK query / Tanstack Query / Tanstack Router
- Docker

PERSONAL PROJECTS

ORIENTATION PAYMENT TRACKER | REACT JS / NEST JS

- The Orientation Payment Tracker is a real-world full-stack application built to efficiently manage and track payment records of agents. It includes powerful query parameter filtering features, enabling users to search, sort, and filter payment data based on specific criteria—making it easy to access and analyze financial information quickly. This project was my first hands-on experience building a complete full-stack solution from the ground up. It taught me how to design a clean and scalable architecture, focus on maintainable code, implement an organized database structure, and deliver a user-friendly experience. .
  Key Features:
  - Query-based search and filtering for fast data retrieval.
  - Secure backend using NestJS with modular architecture.
  - Clean and user-friendly UI optimized for all devices.
  - Database management with PostgreSQL and Prisma ORM
- Gihub

BUDGET TRACKER | NEXT JS

- Budget Tracker is a personal project built with Next.js and TypeScript to track expenses and manage budgets effectively. It utilizes Tan-Stack Query for smooth data fetching and caching, ensuring a responsive and user-friendly experience. This project showcases a clean UI and efficient API integration, highlighting my skills in full-stack development.
  Key Features:
  - Listing signup and verification process.
  - Real-time data fetching and synchronization with API using Tan-Stack Query.
  - Clean and user-friendly UI optimized for all devices.
  - Set and update budgets to monitor financial goals effectively.
- Github

PORTFOLIO WEBSITE | MERN

- This portfolio app showcases my projects, with dynamic uploads managed by me as the admin. Users can easily register, log in, and share testimonials to enhance credibility. Secure cookie-based authentication ensures safe access. .
  Key Features:
  - Modern, Animated and Responsive UI using Nextjs,Taildwind and Framer-Motion
  - Dynamic project uploads with User Authentication and Authorization (Admin and Users)
  - Dynamic, personalized emails using SMTP with custom templates and user-specific data.
- Github

COMPUTER REPAIR BOOKING APP | PERN

- I developed a computer repair booking app with a responsive front-end using React, React Router DOM for navigation, Formik Yup for form handling, Axios for API communication, and Redux for state management. The back-end, built with Express, PostgreSQL, and Prisma, includes secure CRUD operations for bookings, users, and parts, with JWT authentication, bcryptjs for password hashing, and Helmet for security. . Key Features:
  - CRUD operations for users, bookings and parts.
  - Secure authentication with JWT and bcryptjs. Comprehensive admin dashboard for user and admin
- Github

RK CONSULTANT | NEXT JS

- Developed a static website for RK Consultant, showcasing their expertise in accounting, auditing, consulting, and training. Focused on clean design and responsive functionality to highlight their services effectively..
  Key Features:
  - User Friendly and Responsive UI
  - Appointment booking using Calendly

JOB LISTING APP | NEXT JS

- I created a job listing application to explore Server-Side Rendering (SSR) and Incremental Static Regeneration (ISR). The app allows users to manage job postings, apply for jobs, and save their favorite listings, providing a smooth and user-friendly experience for job seekers and recruiters. Although it is not a complete application and lacks authentication, it supports full CRUD operations, showcasing my ability to implement essential functionality while learning advanced rendering techniques..
  Key Features:
  - Pre-rendered job listings for fast performance with SSG (Static Site Generation)
  - Updates static pages efficiently without full re-deployment with help of ISR (Incremental Static Regeneration).
  - Users can favorite jobs, managed using Redux state.
- Github

ECO-BAZAR | REACT

- I developed a fully responsive e-commerce app named "ECOBAZAR" front-end using React. I used React Router for navigation. I incorporated Tailwind CSS for a consistent design. For version control and collaboration, I used Git and GitHub. .
  Key Features:
  - State Management with Redux.
  - Product filtering and responsive UI.
- Github

EDUCATION

Kingsway Acadamy **OCT 2023 – OCT 2024**
BTECH Diploma Course - ***First class Honor*** *Gairidhara Kathmandu, Nepal*

Universal College **Jan 2018 – Dec 2022**
Bachelor's of Business Administration - ***GPA -3.43*** *Santinagar Kathmandu, Nepal*

Premier College **Jan 2015 – Dec 2016**
Management in Computer Science - ***Percentage - 60%*** *Baneshwor kathmandu, Nepal*
